Sequence 4, Application US/09485648
Patent No. 6376445
GENERAL INFORMATION.
APPLICANT: Bettiol, Jean-Luc P.
APPLICANT: Showell, Michael S.
TITLE OF INVENTION: Detergent Compositions Comprising a Mannanase and a TITLE OF INVENTION: Protease
FILE REFERENCE: Mannanase and protease
CURRENT APPLICATION NUMBER: US/09/485,648
CURRENT PILING DATE: 2000-04-05
PRIOR PILING DATE: 1999-06-10
NUMBER OF SEQ ID NOS: 6
NUMBER OF SEQ ID NOS: 6
SOFTWARE: PatentIN Ver. 2.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            89.5%; Score 34; DB 4; Length 369; 100.0%; Pred. J. Call Biol. 155:339-354 (2001).
J. FUNCTION: Involved in poly (A) + RNA transport.
J. SUBUNIT: Forms part of the Nupl60 subcomplex in the nuclear pore which is composed of Nupl60, Nupl33, Nupl07 and Nup96. This composex plays a role in RNA export and in tethering Nup98 and Nup153 to the nucleus.
Vasu S., Shah S., Orjalo A., Park M., Fischer W.H., Forbes D.J.; "Novel vertebrate nucleoporins Nupl33 and Nup160 play a role in mRNA
                                                                                                                                                                                                                           -!- SUBCELLULAR LOCATION: Nuclear pore complex.
-!- CAUTION: Ref.2 sequence differs from that shown due to a frameshift in position 1157 and a stop codon in position 1396.

                                                                                                                                                                                                                                                                                                                                                                                                                                                        TABLEA TO WILLIAM LIGHT AND CHARACTERIES OF THE MELIBIOSE CARTIER OF KIEBSIELL AND CHARACTER AND CHARACTER AND CHARACTER AND CHARACTER TRANSPORT. IT IS CAPABLE OF USING HYDROGEN AND LITHIUM CATIONS AS COUPLING CATIONS COTRANSPORT. IT CATALYZES HYDROGEN CATION-MELIBIOSE, LITHIUM CATION-MELIBIOSE, LITHIUM CATION-MELIBIOSE, LITHIUM CATION-MELIBIOSE, LITHIUM CATION-MELIBIOSE, LITHIUM CATION-MELIBIOSE, LITHIUM CATION-MELIBIOSE, LITHIUM CATION-MELIBIOSE, LITHIUM CATION-MELIBIOSE, LITHIUM CATIONS-METHYL-1-THIO-BETA-D-GALACTOPYRANOSIDE (TMG) COTRANSPORT. THIS PROTEIN SEEMS TO BE LACKING THE ABILITY TO RECOGNIZE SOUDUM CATIONS.

-!- SUBCELLULAR LOCATION: Integral membrane protein. Inner membrane.
-!- SUBCELLULAR ENCATION: Integral membrane protein. Inner membrane.

-!- FUNCTION: Removes the terminal sialic acid from carbohydrate side chains of the host cell surface proteins and from the viral envelope. Such a reaction prevents self-aggregation and facilitate the mobility of the virus to and from the site of infection.
-!- CATALVITC ACTIVITY: Hydrolysis of alpha-(2-3)., alpha-(2-56)-, alpha-(2-8)-glycosidic linkages of terminal sialic residues in oligosaccharides, glycoproteins, glycolipids, colominic acid and synthetic substrates.

Such a reaction prevents self-aggregation and facilitate the mobility of the virus to and from the site of infection.

CATALYTIC ACTIVITY: Hydrolysis of alpha-(2->3)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, alpha-(2->6)-, al

Virology 193:868-876(1993).

-!- FUNCTION: Removes the terminal sialic acid from carbohydrate side chains of the host cell surface proteins and from the viral envelope. Such a reaction prevents self-aggregation and facilitate the mobility of the virus to and from the site of infection.

-!- CATALYTIC ACTIVITY: Hydrolysis of alpha-(2->3)-, alpha-(2->6)-glycopidic linkages of terminal sialic residues in oligosaccharides, glycoproteins, glycolipids, colominic acid and synthetic substrates.
                                                                                                                                                                                                                        MEDLINE-93212520; PubMed-8460490;

                                                                                                                                                                                                                                                                                                                                       VIROLOGY 193:868-876(1993).

-1- FUNCTION: Removes the terminal sialic acid from carbohydrate side chains of the host cell surface proteins and from the viral envelope. Such a reaction prevents self-aggregation and facilitate the mobility of the virus to and from the site of infection.

-1- CATALYTIC ACTIVITY: Hydrolysis of alpha-(2-3)-, alpha-(2-56)-, alpha-(2-8)-glycosidic linkages of terminal sialic residues in oligosaccharides, glycoteins, glycolipids, colominic acid and synthetic substrates.
                                                                                                                                                                                                                                                                  SEQUENCE FROM N.A.

Viriology 193:868-876(1993).

-!- FUNCTION: Removes the terminal static acid from carbohydrate side chains of the host cell surface proteins and from the viral envelope. Such a reaction prevents self-aggregation and facilitate the mobility of the virus to and from the site of infection.
-!- CATALYTIC ACTIVITY: Hydrolysis of alpha-(2->3)-, alpha-(2->6)-, alpha-(2->6)-sh)-glycosidic linkages of terminal static residues in cligosaccharides, glycoproteins, glycolipids, colominic acid and synthetic substrates.
                                                                                            MEDLINE=93212520; PubMed=8460490;

-!- FUNCTION: Removes the terminal sialic acid from carbohydrate side chains of the host cell surface proteins and from the viral envelope. Such a reaction prevents self-aggregation and facilitate the mobility of the virus to and from the site of infection.
-!- CATALYTIC ACTIVITY: Hydrolysis of alpha-(2->3)-, alpha-(2->6)-, alpha-(2->8)-glycopsidic linkages of terminal sialic residues in oligosaccharides, glycoproteins, glycolipids, colominic acid and synthetic substrates.
                                                                                                                                                      MEDLINE=93212520; PubMed=8460490;

                                         Viriology 193:868-876(1993).

-!- FUNCTION: Removes the terminal sialic acid from carbohydrate side chains of the host cell surface proteins and from the viral envelope. Such a reaction prevents self-aggregation and facilitate the mobility of the virus to and from the site of infection.

-!- CATALYTIC ACTIVITY: Hydrolysis of alpha-(2->3)-, alpha-(2->6)-, alpha-(2->8)-glycosidic linkages of terminal sialic residues in oligosaccharides, glycopteins, glycolipids, colominic acid and synthetic substrates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             viruses.";

Eurotiales; Trichocomaceae; mitosporic Trichocomaceae; Penicillium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ribon A.B., Coelho J.L.C., Barros E.G., Araujo E.F.;
"Cloning and characterization of a gene encoding the endopolygalacturonase of Penicillium griseoroseum.";
Submitted (AUG-1998) to the EMBL/GenBank/DDBU databases.
-!- CATALYTIC ACTIVITY: Random hydrolysis of 1,4-alpha-D-galactosiduronic linkages in pectare and other galacturonans.
-!- SIMILARITY: BELONGS TO FAMILY 28 OF GLYCOSYL HYDROLASES (POLYGALACTURONASES).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (GLCNAC. .) Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 162, Application US/09325932A

Patent No. 6451604

GENERAL INFORMATION:

APPLICANT: Lasham, Annette

TITLE OF INVENTION: Compositions affecting programmed cell

TITLE OF INVENTION: death and their use in the modification of forestry plant develo

FILE REFERENCE: 1022

CURRENT APPLICATION NUMBER: US/09/325,932A

CURRENT PILING DATE: 1999-06-04

NUMBER OF SEQ ID NOS: 206

Patent No. 6451604

GENERAL INFORMATION:
APPLICANT: Flinn, Barry
APPLICANT: Lasham, Annette
TITLE OF INVENTION: Compositions affecting programmed cell
TITLE OF INVENTION: death and their use in the modification of forestry plant develc
TITLE OF INVENTION: US/09/325,932A
CURRENT PILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 206
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 163
LENGTH: 174
                                                                                                                                                                                                                                                                                                                                        APPLICANT: MATCH J. Rubenfield et al.
APPLICANT: MATCH J. Rubenfield et al.
